1-9 (canceled).

10. (previously presented) A home entertainment system, comprising:

at least one wireless system server having at least a primary communication system; and

at least one wireless component having at least a primary communication system configured for communicating with the primary communication system of the server, wherein the component sends configuration information to the server using a secondary communication system that is out-of-band with the primary systems, wherein the configuration information is exchanged between the server and component only when the distance between them is within a communication distance and a user manipulates at least one button on at least one of the server, and the component.

11. (currently amended) The system of Claim 10, wherein the secondary communication systems are personal area networks (PAN).

12. (currently amended) The system of Claim 10, wherein the primary communication system is an 802.11 system.

13. (original) The system of Claim 12, wherein the server is established by a set-top box receiver.

14-29 (canceled).
